Steve:

With respect to your request for Applicable or Relevant and Appropriate Requirements (ARARs) at the Cleveland Trencher facility, I compiled a list of them that may be found in the attached spreadsheet entitled "ARARs." In general, these pertain to solid and hazardous waste management, air emissions/asbestos handling requirements and water pollution control.

OEPA-DHWM is seeking closure (remediation) of all areas that were used to store and dispose of hazardous waste under Ohio Administrative Code (OAC) 3745-55-10 through 3745-55-20. In that regard, Generic Cleanup Numbers (GCNs) created by OEPA-DHWM may be used to establish remediation levels. I have attached the document entitled "OEPA DHWM GCNs" which contains the GCNs in an unadjusted format. Should more than one hazardous constituent be present, DHWM requires facilities to do a multi-chemical adjustment of the GCNs. Additionally, I have attached the document entitled "GCN Tech BG" which discusses the use, application, and modification/adjustment of the GCNs.

Should you have any questions, please feel free to contact me. Thank you for all of your time and efforts to address this facility.

Regards,
